EDUCATION

Oregon State University, College of Engineering

Corvallis, OR

Bachelor of Science in Computer Science

Expected Graduation: June 2026

GPA: 3.86

Relevant coursework: Analysis of Algorithms, Data Structures, Discrete Mathematics

SKILLS & CERTIFICATIONS

Tools: Test-Driven Development, Continuous Integration, Agile, Verbal Communication, Troubleshooting, Team Collaboration

Technology: Python, NextJS, React, JavaScript, HTML, CSS, Assembly, SQL, MySQL, Microsoft Office, R, R Studio

PROJECTS

plant.io | *Next.js, TypeScript, Tailwind CSS*

March 2024

- Worked in a team of 2 to improve a plant database search experience.
- Needed to develop a user-friendly interface and integrate microservices for enhanced functionality.
- Designed and implemented the interface using Next.js and Tailwind CSS; integrated a random plant generator microservice using ZeroMQ for inter-service communication.
- Successfully created an intuitive search tool, **enhancing database accessibility**, while the microservice added engaging new features, improving user engagement.

Daily MLB Standings Microservice | *Python, ZeroMQ*

March 2024

- Collaborated with one other developer to automate the retrieval of daily MLB standings.
- Provided an automated and reliable service that fetches standings in JSON format for easy integration into other systems.
- Created a microservice in Python, set up ZeroMQ for inter-service communication, and ensured daily updates.
- **Delivered a dependable microservice** that outputs JSON-formatted standings.

Data Validation Program | *Assembly*

March 2024

- Created a command-line data validation program in Assembly.
- Implemented robust data validation using efficient code to handle string inputs in low-level programming.
- Developed macros and string processing functions in Assembly to validate user input and handle data errors.
- **Produced a fast and efficient CLI-based program** that performed data validation accurately, showcasing deep understanding of low-level programming and optimization techniques.

The Burger App | *MongoDB, React, HTML, CSS, Nodejs, Express*

December 2023

- A solo project to create a web app for users to manage burger entries with full CRUD functionality.
- Developed a full-stack application supporting database operations and a user-friendly UI.
- Utilized MongoDB for backend storage, developed frontend with React, managed routing with Node.js and Express.
- Successfully **deployed a functional and responsive web app** that allowed users to manage burger entries efficiently, with an intuitive interface and robust backend.

AFFILIATIONS & INTERESTS

Member | Linux User Group | Oregon State University

January 2022 – Present

Member | Security Club | Oregon State University

January 2022 – Present

Member | Society of Hispanic Professional Engineers | Oregon State University

September 2024 – Present

CodePath | TIP 103 Alumni Summer 2024, CYB 102 Fall 2024

Interests: Music production, Biking, Guitar (self taught for 12 years)
